Assignment #6: Shiny App
Cindy Barreto – Ecology and Evolutionary Biology, Ph.D.

For this assignment, Jessica Gutierrez and tried to run a script available in Dryad for a shiny app. We could run it using the code provided and the excel files. However, when we needed to run the "app" script itself, we started to have errors. For me, I could not even create the html files to finish the script. I believe it can be due to: 1) I needed the file previously made, which was not provided; 2) I needed to create a file, but I was facing coding issues; or 3) I was not able to create the html files due to missing data. Therefore, the farther we could go is to understand how to build the coding for a shiny app and build the script to run the app itself.
